Re: Pre-Construction Survey

Dear Resident,

South Fork Wind is in the final stages of preparing for the start of construction, which is anticipated to start in late-January 2022. To support that effort and pursuant to project permitting requirements, a survey will be taking place within the next four weeks along the project route to mark out one or more of the following:

- Edge of right of way, as certified
- Access roads and work areas
- Environmental features including trees slated for removal at the substation location on National Grid property, within the Long Island Rail Road rights-of-way, and on portions of Town-owned rights-of-way that intersect with the LIRR corridor. As stated in the Vegetation Management Plan, these trees will be marked for review and acceptance by DPS Staff, NYSDEC, and the Town before removal can occur. No trees along Beach Lane will be removed

The survey crews completing the work will carry proper identification.

As we continue to prepare for the start of construction, you will receive additional notification when the start date is finalized. If you have questions, please don't hesitate to contact us.
